

ELASTA-GARD DIRECT BOND ROOFING SYSTEMS

Elasta-Gard Direct Bonded Roof Systems installed by *Washington Roofing and Insulation* are high performance, fluid applied roof systems engineered for toughness and durability. They dramatically increase a roof's service life and can be installed over new or existing built-up, modified bitumen, metal, concrete and single-ply roofs.

Before

Can be applied over existing metal roofs

After

Before

Can be applied over old smooth and granulated modified roofs

After

Seamless - Stops leaks, while bridging seams, cracks & other deficiencies.

Flexible - Elasta-Gard systems resist damage from thermal movement, impact and standing water.

Durable - 100% sustainable membrane requires little maintenance, with periodic re-coating to last the life of the building.

Cost effective - Savings without disruptive tear-off and disposal can be dramatic.

Lightweight - Usually weighs less than 1/2 pound per square foot.

Washington Roofing & Insulation has completed millions of square feet of roofing and waterproofing projects in their 30 plus years of experience with quality being Job One and safety a top concern.

Washington Roofing & Insulation is a Q1 applicator with BASF Foam Enterprise and a Performance Based Contractor with accountability to NEOGARD Corporation and PBSRG of the Dale E. Webb School of Construction at Arizona State University.

SPRAYED POLYURETHANE FOAM ROOF SYSTEMS - SPF

Washington Roofing and Insulation has been in the business for nearly 35 years providing seamless protection for customers who simply cannot afford to have leaks in their buildings or structures. Sprayed Polyurethane foam roof systems (SPF) are a seamless, fully adhered application that provides a number of advantages other systems cannot.

SPF roof systems can be installed over an old modified roof, built-up roof or metal roof. SPF delivers on performance and saves the customer money by eliminating costly tear-offs.

Before

Can be applied over metal roof

After

SPF Alpha application (15 year leakproof warranty)

After

Can be applied over old granulated modified roofs

Before

Other unique advantages of SPF are:

- Energy efficient, provides a seamless monolithic insulating barrier. (Saves money on utility bills)
- High wind up-lift rating
- 100% seamless and self-flashing
- Easily applied

SPF roof systems are warranted from 5, 10 to 15 years depending on the needs and budgets of the customer. The warranties are also renewable after the existing warranty has expired. Properly maintained, an SPF roof system could be the last roof you put on!

Before

Can be applied over old built-up gravel roofs

After
